A FIRE RETARDANT COMPOSITE PANEL PRODUCT AND A METHOD AND SYSTEM FOR FABRICATING SAME

ABSTRACT OF THE INVENTION

In one embodiment, a fire retardant composite panel material is fabricated. A water-based slurry comprising partially soluble boric acid and borax pentahydrate solids is created. An adhesive used in the composite panel fabrication process is added to fibers. The water-based slurry is separately added to the adhesive and, after mixing, to the fibers. The composite panel produced thereby is also described.
